TAREQ ABOUSHI

Software Engineer & AI Architect

+966 534 418 634 | Email | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Innovative Software Engineer and AI Architect with a strong foundation in designing scalable microservices, intelligent AI pipelines, and data-driven enterprise solutions. Proficient in a polyglot stack (Python, Go, TypeScript) and modern ML frameworks. Demonstrated success in orchestrating complex cloud-native architectures, automating workflows, and leveraging Generative AI and Machine Learning to solve high-impact engineering challenges.

WORK EXPERIENCE

Computer Teacher & IT Department Manager *2024 - Present*

National Schools | Saudi Arabia

- Directed data management operations by designing structured databases for academic and administrative records, ensuring data integrity, security, and accessibility.
- Managed comprehensive e-learning systems (LMS) and led the design and maintenance of school web portals.
- Developed and implemented computer science curricula with a focus on modern programming and AI applications.

Cooperative Trainee (Software Engineering) *2023 - 2024*

Saudi Electricity Company | Saudi Arabia

- Designed and managed complex data models to streamline analysis workflows, leveraging data insights to support strategic decision-making processes.
- Contributed to a 20% improvement in team efficiency by automating routine data tasks and applying agile best practices.
- Assisted in the development of internal tools to monitor operational metrics.

SELECTED ENTERPRISE PROJECTS

AI-Powered Codebase Migration Engine (Repo Refactor Engine)

- Architected a robust AI pipeline using Python and FastAPI that autonomously parses, semantically caches, and translates entire repositories across programming languages using Large Language Models.
- Implemented an 11-phase execution hook system with atomic rollback snapshots and AST (Abstract Syntax Tree) parsing to guarantee zero-fault migrations.

Enterprise GraphRAG Pipeline

- Engineered an advanced Retrieval-Augmented Generation (RAG) system using LangGraph, Neo4j, and Qdrant to process and query massive relational datasets.
- Designed multi-agent AI workflows capable of autonomous data retrieval and logical reasoning for complex business intelligence queries.

Polyglot Microservices E-Commerce Platform

- Developed a highly scalable e-commerce backend utilizing a polyglot Microservices architecture orchestrated via Docker Compose.
- Built the API Gateway in Node.js, engineered a high-performance Inventory service in Go, and deployed an AI Recommendation engine in Python.

Machine Learning Predictive Analytics Suite

- Trained and deployed multiple ML models including an Isolation Forest-based Invoice Auditor for fraud detection, and a Random Forest regressor for accurate real estate valuation.
- Containerized the inference APIs using Docker and exposed them via FastAPI for real-time predictions.

TECHNICAL SKILLS

Languages:	Python, Go, TypeScript/JavaScript, Java, C#, SQL, Bash
Backend & Frameworks:	FastAPI, Node.js (Express), React, Next.js, Celery, RESTful APIs
AI & Data Science:	RAG, LangGraph, Scikit-Learn, Pandas, Vector DBs (Qdrant), Graph DBs (Neo4j)
DevOps & Architecture:	Docker, Redis, Microservices, CI/CD Pipelines, GitHub Actions, Agile

EDUCATION

Bachelor of Computer Science - AI Track *2021 - 2025*

King Khalid University | Saudi Arabia

CERTIFICATIONS

- STEP (Standardized Test of English Proficiency) - Score: 85
- Artificial Intelligence Certificate - KAUST
- Huawei Certified ICT Associate (HCIA) - Security
- Cybersecurity Bootcamp - Attaa Digital
